

Hands-on Training: *in vitro* flow system and FAIR data integration for safety assessment

Get familiar with **organ-on-a-chip** technology and learn how ***in vitro* & *in silico* data integration** can enhance your research and apply to safety assessment!

- Overview of **regulatory requirements for safety assessment** of chemicals and drug development, FAIR data principles and application of innovative *in vitro* flow systems;
- Hands-on training on **Quasi Vivo®** interconnected cell culture flow system engineered to provide *in vivo*-like conditions for cell growth;
- Learn how to prepare your harmonised data templates according to best practices and use **Edelweiss DataExplorer** interface to optimise the data for computational modelling.

Joint workshop by

7 - 8 February 2019, Technology Park Basel

Hochbergerstrasse 60C, Basel, Switzerland
